

Chart 1 is the chart that represent time versus percentage error. In the above plot the window size is 4 and there 2605 packets to be sent. The different color lines represent different types of errors in the protocol.

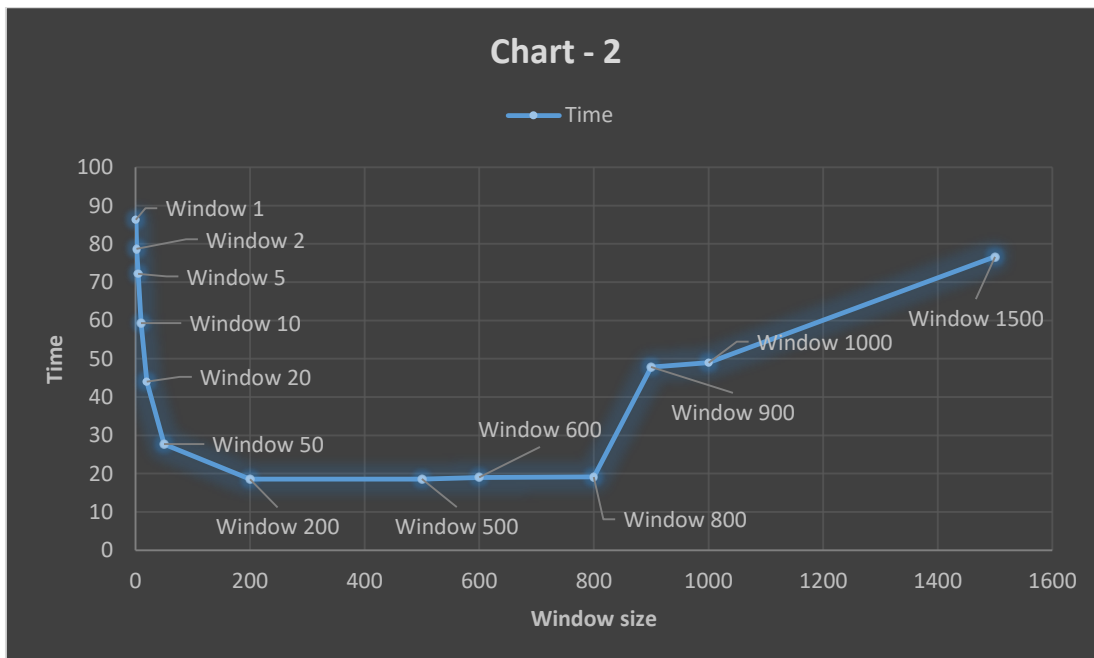

Chart 2 represent time versus window size graph. This graph was plotted with a data error of 5% and 2605 packets were transferred.

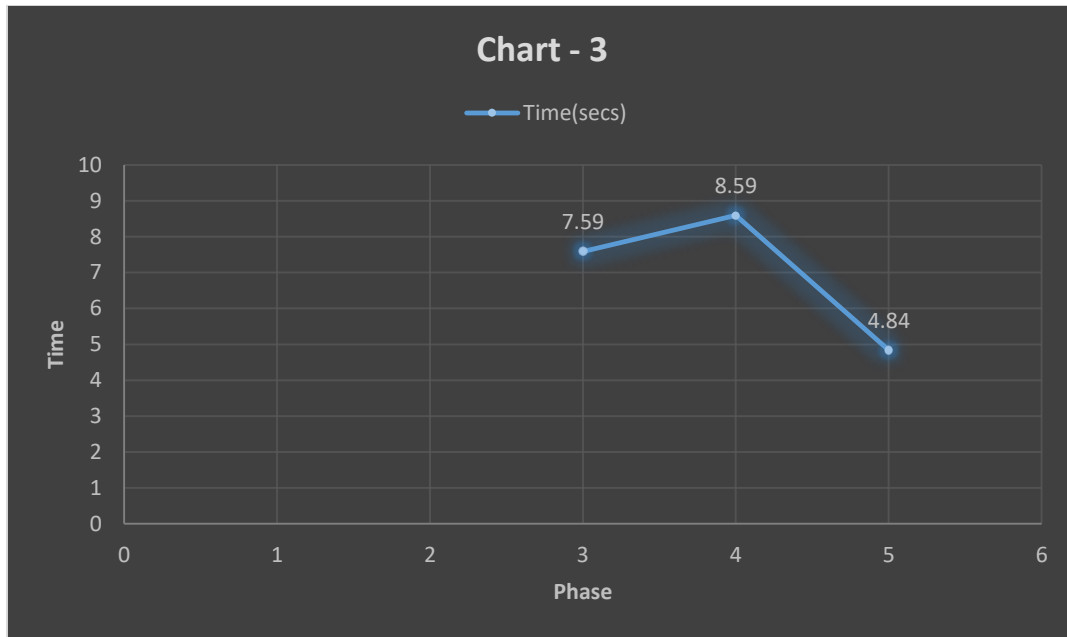

Chart 3 represent time versus phase plot. In this plot same image and packet size was used for the transfer of 2605 packets.
